DATE MAILED: 03/20/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/709,030

Applicant(s)

GORDON ET AL.

Examiner

Hunter B. Lonsberry

Art Unit

2611

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 January 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 23-37 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 23-37 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 23-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,844,620 to Coleman in view of U.S. Patent 6,779,195 to Oishi.

Regarding claim 23, Coleman discloses a method for keeping track of program indexes in an interactive delivery system, comprising:

maintaining track of which of a plurality of interactive program guide (IPG) pages are currently received at a terminal from a headend by using a program map table (PMT) (column 13, lines 25-33), and a roster (column 13, line 49-column 14, line 22, program guide elements stored in RAM);

receiving a request from a viewer at the terminal for a selected IPG page (column 6, lines 39-43, column 18, lines 27-47);

determining whether the selected IPG page is currently received at the terminal from the headend by consulting the roster (column 13, line 62-column 14, line 22) and

if the selected IPG page is currently received, then using the roster to determine which packet identifier (PIDs) used to transmit a plurality of regions of the selected IPG page, processing these PIDs to recover the selected IPG page, and presenting the selected IPG page to the viewer, without requesting transmission of the selected IPG page from the headend (column 14, lines 23-62, column 17, lines 22-65).

Coleman fails to disclose maintaining track of which IPG pages are currently received by using a program association table (PAT),

Oishi discloses an MPEG2 enabled system which utilizes a PMT to identify audio, video, and data PIDS associated with an IPG page (column 4, line 47-, column 5, line 22, 63-column 6, line 9, 21-33, figure 4), and generating a PAT to identify the PIDs for the PMT for the EPG pages via the Event Information tables(column 4, line 47-, column 5, line 22, 63-column 6, line 9, 21-33, column 12, lines 29-42, 51-column 13, line 22, figure 5), thus enabling a STB to easy find requested programming content and making use of the high quality video MPEG2 offers.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Coleman to utilize the MPEG2 features and PAT as taught by Oishi for the advantage of enabling a STB to easy find requested programming content and making use of the high quality video MPEG2 offers.

Regarding claims 24, 29, and 34, Coleman discloses that if the selected IPG page is not currently received, the terminal requests transmission of the selected page from the headend (column 6, lines 30-58, the user requests the pages and it is stored in RAM and is formatted in the same format as the trickle stream).

Regarding claims 25, 30, and 35, Coleman discloses that roster elements for each page are transmitted from the headend to the terminal and stored at the terminal within the roster (column 8, lines 32-43, column 13, lines 25-column 14, line 8).

Regarding claims 26, 31 and 36, Coleman discloses that the roster is updated as new IPG pages are transmitted by the headend (column 13, line 49-column 14, line 22).

Regarding claim 27, 32, and 37, Coleman discloses that the roster is updated as old pages are removed (column 14, lines 7-22).

Regarding claim 28, Coleman discloses system for keeping track of program indexes in an interactive delivery system, comprising:

a tracking component at a terminal to maintain track of which of a plurality of interactive program guide (IPG) pages are currently received at the terminal from a headend by using a program map table (PMT) (column 13, lines 25-33), and a roster (column 13, line 49-column 14, line 22, program guide elements stored in RAM); and

a remote control unit coupled to the terminal to receive a request from a viewer for a selected IPG page (column 13, line 62-column 14, line 7);

wherein the tracking component determines whether the selected IPG page is currently received at the terminal from the headend by consulting the roster (column 13, line 62-column 14, line 22);

wherein, if the selected IPG page is currently received, then the tracking component uses the roster to determine which packet identifier are used to transmit a plurality of regions of the selected IPG page (foundation and schedule/title records, column 14, lines 52-62), processing these PIDS to recover the selected IPG page, and presenting the selected IPG page to the viewer, without requesting transmission of the selected IPG page from the headend (column 14, lines 23-62, column 17, lines 22-65).

Coleman fails to disclose maintaining track of which IPG pages are currently received by using a program association table (PAT),

Oishi discloses an MPEG2 enabled system which utilizes a PMT to identify audio, video, and data PIDS associated with an IPG page (column 4, line 47-, column 5, line 22, 63-column 6, line 9, 21-33, figure 4), and generating a PAT to identify the PIDs for the PMT for the EPG pages via the Event Information tables (column 4, line 47-, column 5, line 22, 63-column 6, line 9, 21-33, column 12, lines 29-42, 51-column 13, line 22, figure 5), thus enabling a STB to easily find requested programming content and making use of the high quality video MPEG2 offers.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Coleman to utilize the MPEG2 features and PAT as taught by Oishi

Art Unit: 2611

for the advantage of enabling a STB to easily find requested programming content and making use of the high quality video MPEG2 offers.

Regarding claim 33, Coleman discloses a computer readable medium storing instructions for performing a method for keeping track of program indexes in an interactive delivery system, comprising:

maintaining track of which of a plurality of interactive program guide (IPG) pages are currently received at a terminal from a headend by using a program map table (PMT) (column 13, lines 25-33), and a roster (column 13, line 49-column 14, line 22, program guide elements stored in RAM);

receiving a request from a viewer at the terminal for a selected IPG page (column 6, lines 39-43, column 18, lines 27-47);

determining whether the selected IPG page is currently received at the terminal from the headend by consulting the roster (column 13, line 62-column 14, line 22) and

if the selected IPG page is currently received, then using the roster to determine which packet identifier (PIDs) used to transmit a plurality of regions of the selected IPG page, processing these PIDs to recover the selected IPG page, and presenting the selected IPG page to the viewer, without requesting transmission of the selected IPG page from the headend (column 14, lines 23-62, column 17, lines 22-65).

Coleman fails to disclose maintaining track of which IPG pages are currently received by using a program association table (PAT),

Oishi discloses an MPEG2 enabled system which utilizes a PMT to identify audio, video, and data PIDS associated with an IPG page (column 4, line 47-, column 5, line 22, 63-column 6, line 9, 21-33, figure 4), and generating a PAT to identify the PIDs for the PMT for the EPG pages via the Event Information tables(column 4, line 47-, column 5, line 22, 63-column 6, line 9, 21-33, column 12, lines 29-42, 51-column 13, line 22, figure 5), thus enabling a STB to easy find requested programming content and making use of the high quality video MPEG2 offers.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Coleman to utilize the MPEG2 features and PAT as taught by Oishi for the advantage of enabling a STB to easy find requested programming content and making use of the high quality video MPEG2 offers.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hunter B. Lonsberry whose telephone number is 571-272-7298. The examiner can normally be reached on Monday-Friday during normal business hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
